

TREND-SUIT

JUNIDE CHRIS A (221701026)

HARSHATH V (221701019)

ABSTRACT

In the fast-paced world of fashion, individuals often struggle to find outfits that complement their body type and style preferences. TREND-SUIT App addresses this challenge by providing a smart and personalized clothing suggestion platform. The app leverages user-provided body measurements to recommend matching shirts, pants, shoes, and accessories like sunglasses, watches, and belts.

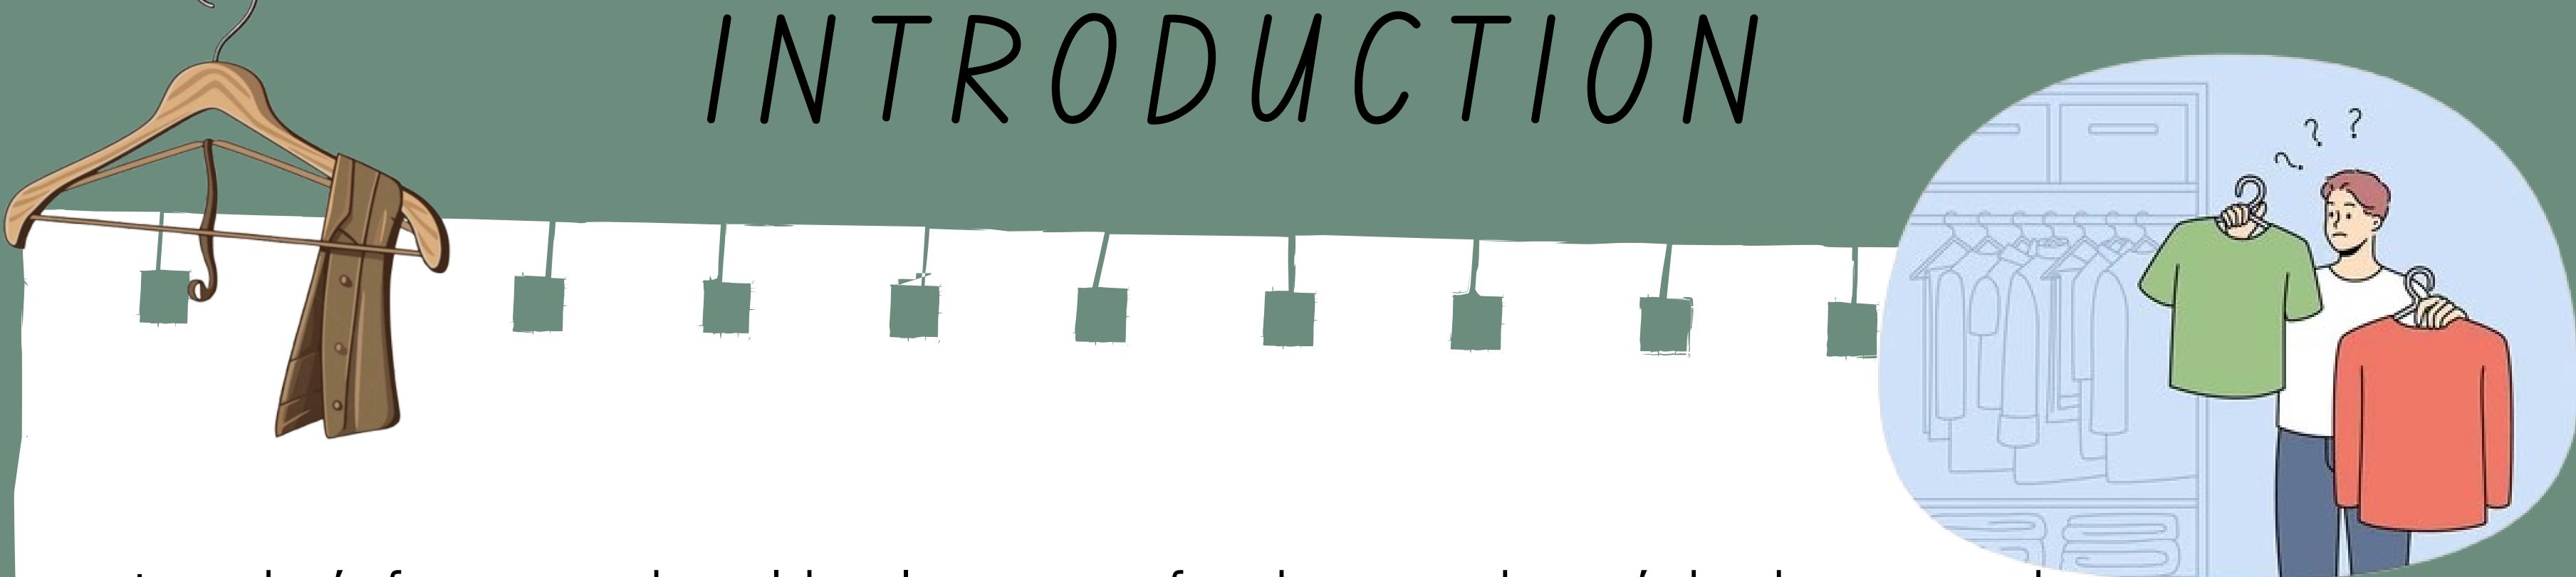

Using a combination of algorithms and a database of fashion rules, the app ensures that recommendations align with the user's body proportions, skin tone, and style preferences. The system integrates a simple user interface for entering body measurements and selecting desired styles (casual, formal, sporty, etc.). It processes this information to generate a curated outfit suggestion that maximizes comfort, fit, and style.

This project aims to enhance user confidence in dressing, reduce time spent on decision-making, and create an enjoyable fashion experience. Future advancements could involve incorporating machine learning to refine recommendations based on user feedback and integrating AR (Augmented Reality) for a virtual try-on experience.

TREND-SUIT App stands as an innovative solution to a common problem, making it easier for users to look and feel their best.

INTRODUCTION

In today's fast-paced world, selecting outfits that match one's body type and style preferences can be challenging and time-consuming. Many struggle to find clothing that complements their proportions and personal style, often leading to frustration.

The TREND-SUIT App simplifies this process by offering a smart platform for tailored clothing suggestions. Combining technology and fashion expertise, it provides a seamless and personalized dressing experience, transforming how individuals choose their outfits.

OBJECTIVE

- * **Promote Confidence in Appearance**
- * **Deliver Accurate Recommendations**
- * **Enhance Fashion Experiences**
- * **Promote Comfort and Style**

METHODOLOGY

1. Requirement Analysis: Identify user needs and research existing systems for insights.
2. Data Collection: Build a database of clothing items, accessories, and styling rules.
3. User Input System: Create an intuitive interface for body measurements and style preferences.
4. Recommendation Engine: Develop algorithms to provide personalized outfit suggestions using fashion rules.
5. Personalization: Integrate machine learning for continuous improvement based on feedback.
6. Enhancements: Plan future AR integration for virtual try-ons and occasion-based suggestions.
7. Testing: Validate accuracy and usability across diverse users.
8. Deployment: Launch on platforms like iOS/Android and update regularly.

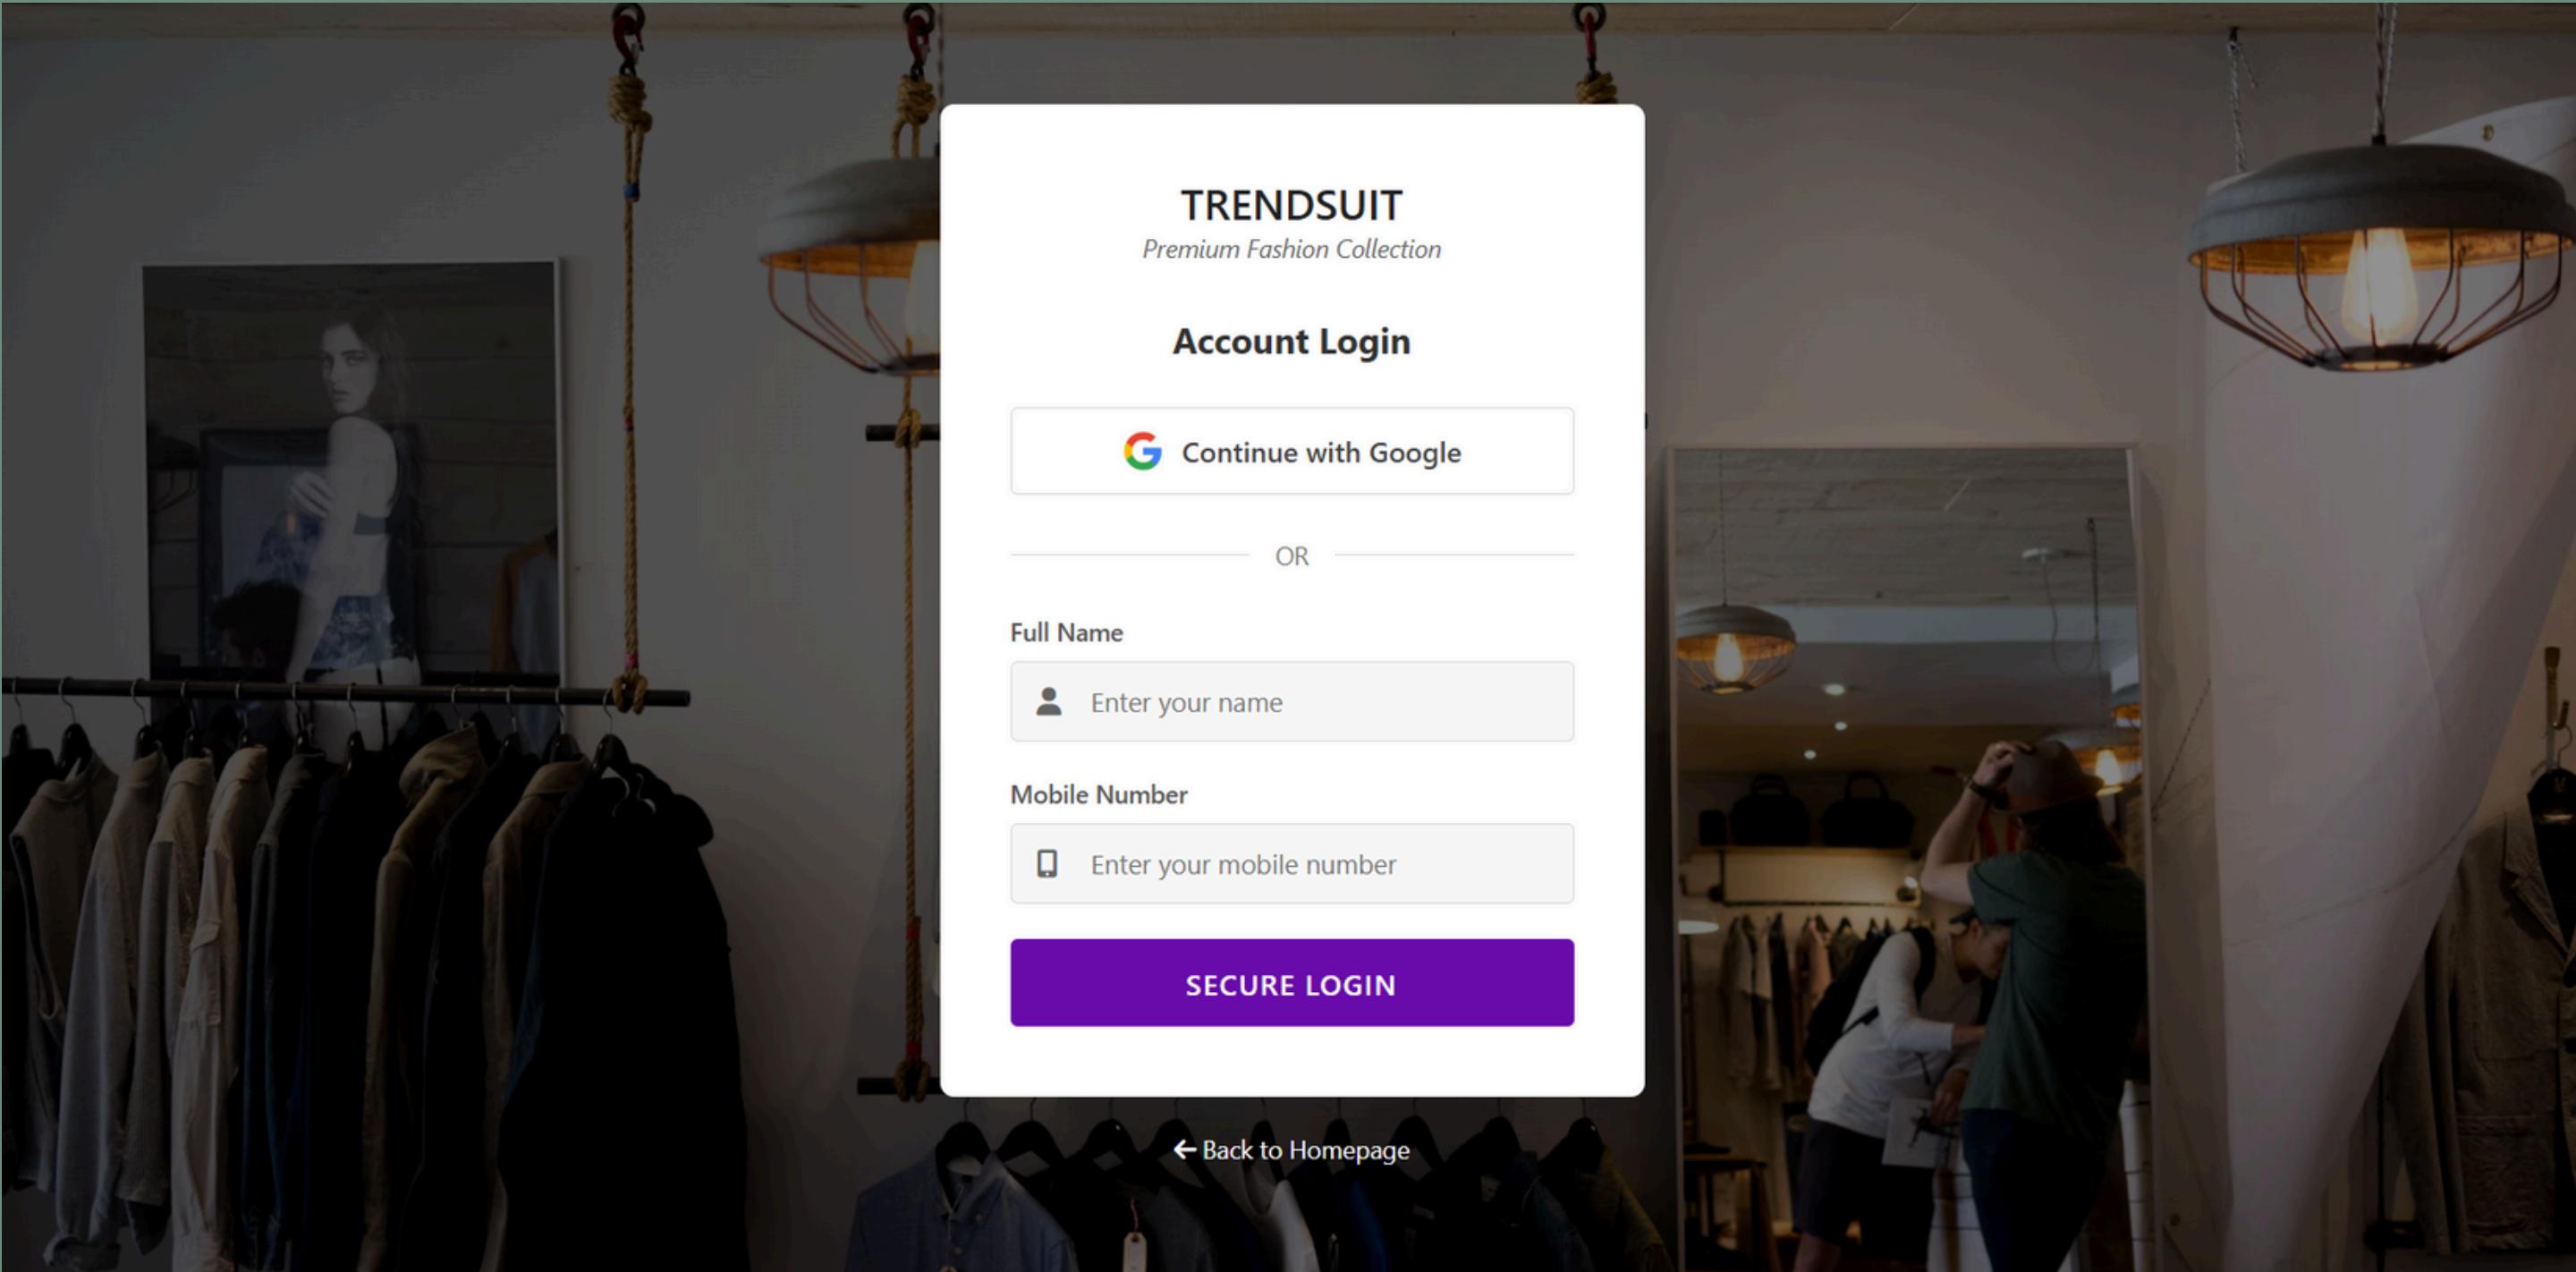

EXPECTED OUTPUT

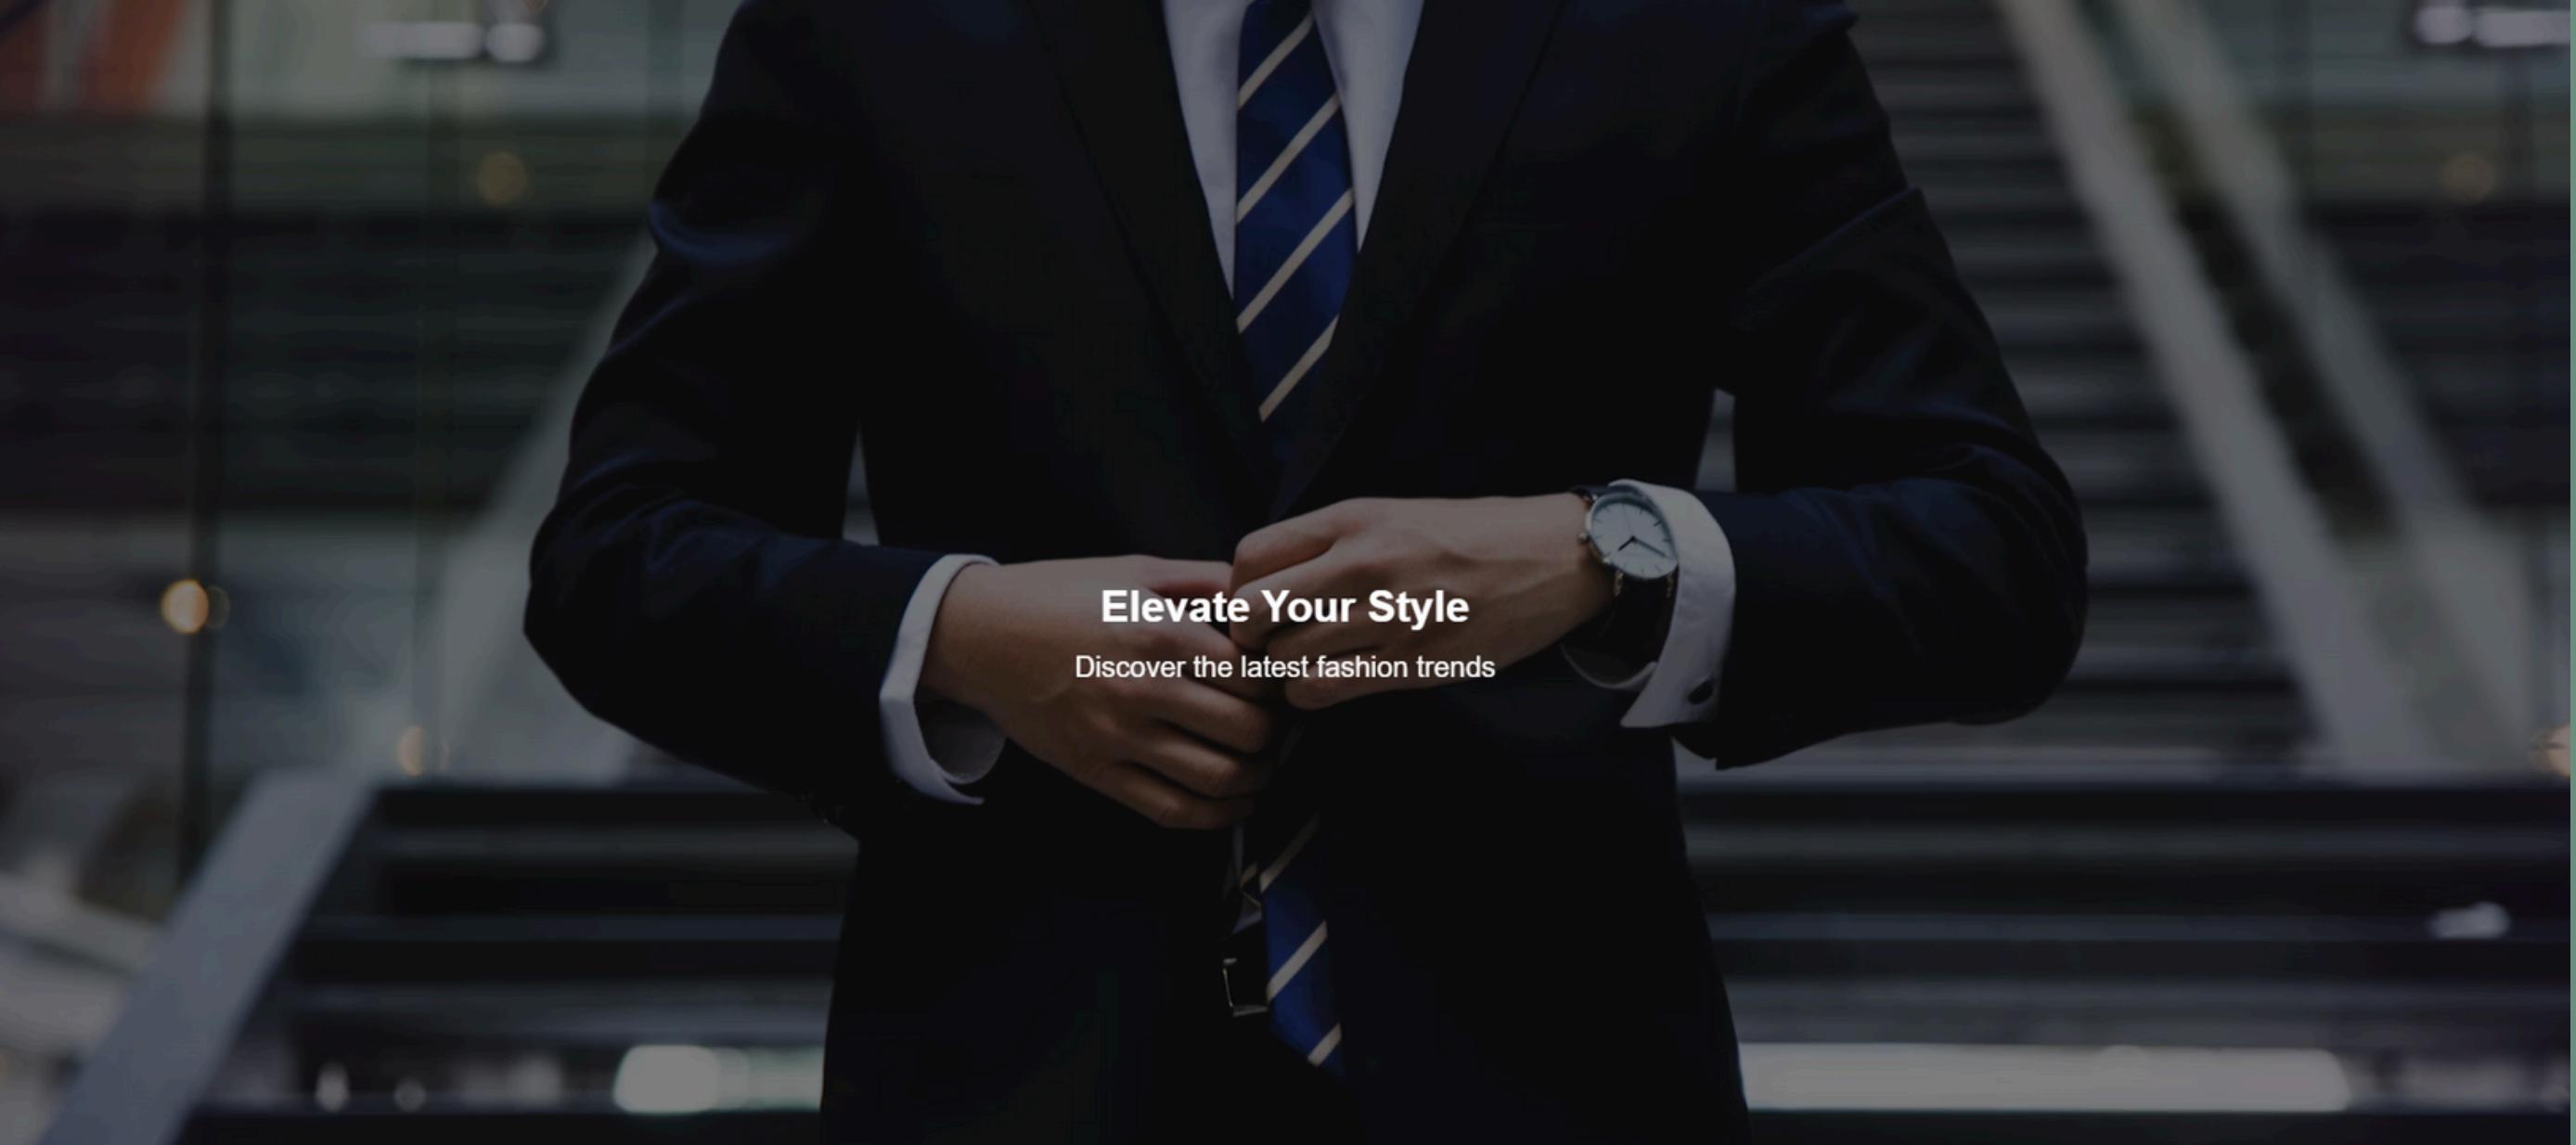

UNIVERSAL COLORS OF TROUSERS

TROUSER	SHIRT COLORS
